I aim to work in a professional, team-oriented environment, where I can take on challenges that enhance my technical and communication skills while fostering personal development.

Work Experience:

AI Prosys as Software Developer   2 – 2023 /Present

Responsibilities:
- Led website development projects, ensuring they met client needs and adhered to high-quality standards.
- Focused on API integration to enhance website functionality and improve user experience.

Experience:
- Developed and maintained front-end applications using Angular, creating dynamic and responsive user interfaces.
- Built and managed back-end systems with PHP, ensuring robust and scalable server-side logic.
- Debugged and resolved complex issues, improving overall system stability and performance.
- Worked with manufacturing systems, integrating production line I4.0 technologies.
- Designed and implemented CRUD APIs for seamless data management.
- Created custom dynamic functions to simplify system use, including features like Excel import/export, e-signature integration, and WordPress plugin development.

Projects:

Property Management Systems (Grandmark, BestLocation): Developed and implemented features to streamline tenant and asset management for efficient property operations. Ensured seamless property tracking and maintenance through automated workflows.

Lawyer System (Dauwa360): Built a comprehensive legal management platform, improving case handling and document workflows for law firms. Enhanced client and case management efficiency by introducing intuitive document tracking systems.

Factory Production Line Management System (I4): Designed and developed an automation system to optimize manufacturing processes and increase productivity. Integrated real-time monitoring to improve production line oversight and issue resolution.

E-commerce Solutions: Enhanced customer experience and streamlined transaction handling in e-commerce platforms. Implemented secure payment gateways and user-friendly interfaces to boost sales conversions.

API Integration for Mobile Apps: Specialized in integrating APIs to improve functionality and ensure seamless connectivity between mobile apps and backend services. Delivered robust, scalable solutions to support smooth cross-platform communication.
